### \* Important Footnotes:

Characteristics shown are for an account or composite representative of WCM's Mortgage Income strategy as of June 30, 2010.

Actual holdings, sector weightings, percentage allocations, and portfolio characteristics in individual client portfolios may vary and are subject to change.

The software used to calculate portfolio characteristics is a tool for traditional fixed income securities. Because the private placement mortgages differ in some features from bonds, the characteristics presented should be considered only an estimate to the best of our ability. The characteristic calculations are based upon the earlier of reset date or final maturity.

Geographic and property type percentages apply to mortgages only based on market value; excludes short term cash and securities which may be held in the portfolio.

Data sources used to calculate characteristics include but are not limited to YieldBook, Bloomberg, and FTID. We believe this information to be reliable, but no assurances can be given that it is accurate or complete.
